

## New Product Announcement

Air Movement Products  
Cooltron Heatsinks

February, 2014

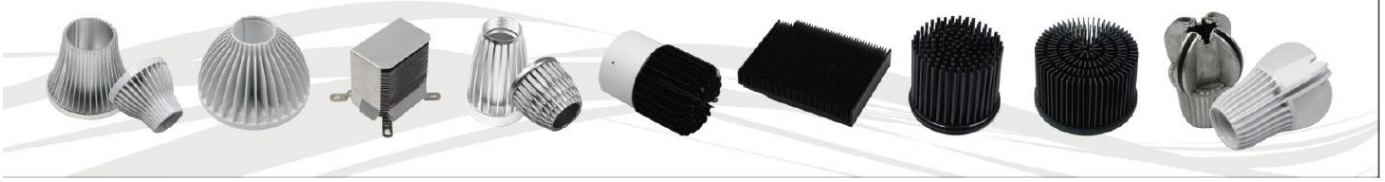

### Cooltron Heatsinks

Cooltron is honored to introduce their new intelligent, high efficiency custom heat sinks. Combined with the leading manufacturing technology, diverse thermal interface materials, our high-efficiency heat sink with embedded fan suitable for widely applications.

Please find attached complete product information with specific technology description, the manufacturing process, product images and application note. Please let us know if you have any questions of our new product line

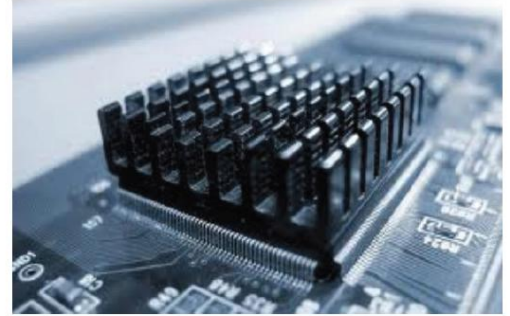

# Cooltron New High Thermal Efficiency Product Highlight

## New Value-Added Customization: Heat Sinks

### Enjoy Innovative Attachment Mechanism from Cooltron

Cooltron's new intelligent, high efficiency custom heat sinks provide mechanical security and reliable performance of thermal interface materials. Our new heat sinks feature more diverse and high-tech options in materials and designs to help our customers conquering their most demanding thermal challenges.

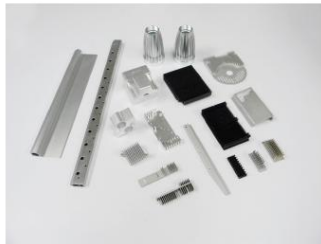

## The Leading Manufacturing Technology

### Including Forging, Extruding, Stamping and Skiving

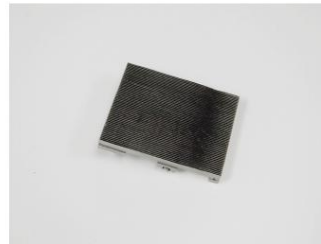

Cooltron has leading technology capabilities to produce various designs and sizes with precision making process. Cooltron specializes in diverse leading-edge technologies, such as forging, extruding, stamping and skiving.

Forging heat sink

Extruding

Skiving parts

Stamping parts

## Diverse Thermal Interface Materials

Cooltron has constantly put efforts on development in advance product performance by tryout various materials to serve the designed functions. Four major heat sink materials listed below:

1. Aluminum alloy
2. Pure Aluminum
3. Copper
4. Cooper Embedded

## Comprehensive Production Line

As one of the leading thermal solution suppliers, Cooltron has the comprehensive production lines and our factory has established ISO 9001 and 14001. All our products are certified by RoHS compliant.
